Simple, Functional IPM — it's *Bio-Logical*

Build a stronger, easier IPM program for your greenhouse or nursery.

Growers face constant pressure to protect crop quality while meeting rising expectations around stewardship and responsible pest management. Biological tools like beneficial nematodes and biopesticides work with your existing program to strengthen control, reduce resistance pressure, and support overall plant health. When paired with targeted conventional options, they help create **a balanced, flexible system that fits the way you grow.**

The Bio-Logical Approach: Functional, Flexible IPM

Choose 2-5 options across these Functional Groups to automatically build a rotation with multiple modes of action. **Using BASF's Building Blocks for Better Plants Solutions** keeps your program adaptable to changing pest pressure and easy to manage week to week.

Functional Group	Target	BASF Solution
Biological Control Agents (BCAs)	Host-Specific	Nemasys® and Millenium® Beneficial Nematodes *Ideal for fungus gnat, shorefly and other soil-dwelling pests*
Formulated Biologicals	Targeted	Velifer® Bioinsecticide / Miticide *Strong option for thrips, mites and whitefly suppression*
Targeted Conventionals	Targeted	Sultan® Miticide [25] Ventigra® Insecticide [9D]
Growth Regulators (IGRs/MGRs)	Targeted	Check labels and BCA compatibility with active ingredients: buprofezin, clofentezine, novaluron, pymetrozine, spiromesifen
Oils and Soaps	Broad-Spectrum Short-Lived	Ultra-Pure® Oil Horticultural Insecticide, Miticide and Fungicide
Broad-Spectrum Conventionals	Broad-Spectrum Rescue	Pylon® Miticide-Insecticide Pylon TR Insecticide Pyrethrum® TR Insecticide

Broad-spectrum and all product category choices are optional and may be used on an as-needed rescue basis, or not at all in your operation. **Always read and follow label directions.**

Every operation is unique—but rotations don't need to be complicated.

A simple approach:

1. Pick 2-5 tools from different Functional Groups.
2. Rotate them weekly or as pressure dictates.
3. Layer biologicals with targeted conventional solutions for steadier long-term control.

This gives you multiple MOAs, better resistance management, and a more resilient program throughout the production cycle.

Strengthen your IPM with *Bio-Logical* Solutions.
